## Reclamation

A line drawn in the earth

frontier," it's been called-the Mining Law of 1872. Designed to encourage settlement of the West, the law does not require hardrock mining companies to pay royalties to the U.S. government and allows them to obtain title, or patents, to public lands for between \$2.50 and \$5 an acre—the price set 120 years ago. In Montana a company has

applied for patents to 2,300 acres of platinum and palladium deposits worth billions of dollars. Cost of the patents: \$10,000. Foreign companies can also benefit from the lenient law. A Canadian venture has been mining almost half a billion dollars a year in gold from a site in Nevada.

Taxpayers will incur further losses as bills come due for cleanup of abandoned sites. The Mineral Policy Center says it may cost 70 billion dollars to reclaim non-coal mines that pose health and environmental problems. The 1872 Mining Law is nov under review by Congress.

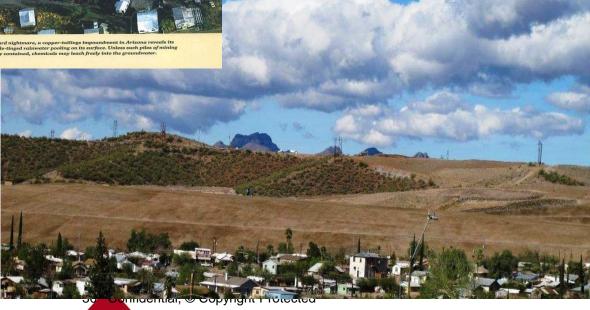

ARIZONA Backyard nightmare, a copper-tailings impo toxicity in the sulfide-tinged rainwater pooling on its surface. Unless such piles of mining residue are properly contained, chemicals may leach freely into the groundwater.

#### Outreach Engagement

Application:

 Engage students, communities, governments, professionals worldwide

Approach:

- Education modules
- K12 activities
- Leadership training
- Safety competency
- Legislative briefings
- Pan American Hub for Compatible Mining

Wins:

- Lower social risk
- Capacity building in community
- Government engagement
